

93%

TEAM ADOPTION • TWELVE-MONTH ENTERPRISE TRANSFORMATION • 26 PRODUCTION SYSTEMS

I build AI operating systems that
people *actually* use.

CONTENTS

A brief in five chapters.

The record first, then how it was done — the strategy, the systems, and the people who now run them. Governance runs through all three. The work follows as case files; the letter closes it.

THE RECORD — twelve months, measured	4
01 STRATEGY — the formula, the decisions, the post-mortems	5
02 TRANSFORMATION — the twelve months, down to the ledger	7
03 EDUCATION — the roster that runs without me	10
HOW THIS RUNS SAFELY — governance, cross-cutting	13
04 THE WORK — six case files	16
CATALOG INDEX — the remaining 34	20
ON THE RECORD — press & keynotes	23
05 A LETTER — from the author	24

This document is a private briefing. The figures inside are measured, not estimated: adoption is counted on live work-flows, returns on displaced license invoices, and pipeline in the CRM of record. Where a number is self-reported, the sourcing note says so.

PRODUCTION SCREENSHOTS ARE BLURRED FOR CONFIDENTIALITY.

THE RECORD

Twelve months, measured.

93%

team adoption in 12 months

26

production systems in daily use

\$2M+

first-year economic value — itemized in the ledger

280

hours/week returned to the team

\$1M+

AI-attributed pipeline, tracked separately

Counting rules and itemization: the ledger (p. 9). Adoption measured on live workflows; hours per the FY26 Q3 quarterly business review; pipeline tracked separately from P&L.

“One of the best hires I’ve made in my entire career.”

— MARK BOOTHE • CHIEF MARKETING OFFICER, DOMO

SELECT ENGAGEMENTS

Direct client engagements and Domo-guided engagements.

CHAPTER 01

Strategy

3

The framework behind 93% adoption — the reasoning, the decisions, and the attempts that failed on the way there.

INGREDIENTS, APPLIED IN FIXED
ORDER

THE CORE FRAMEWORK

The three-ingredient formula

The strategy came from study — across AI strategy, adoption patterns, implementation practice, and organizational change before I wrote a single line of code. The research kept returning the same answer: adoption is a sequencing problem, three ingredients in a fixed order.

SEQUENCE

mindset → enablement → tools
applied in that order, never
reversed

01 Mindset

Shift the story from “AI will replace me” to “AI makes me dangerous.” Without this, nothing else matters.

02 Enablement

One-on-one coaching rather than training — sit with each person and build their specific workflow together. This is the hard part.

03 Tools

Role-specific AI tools that solve real problems. Tools come last; without the first two ingredients they become shelfware.

THE RECORD OF CHOICES

The decision log

DECISION

RATIONALE

Marketing as the proving ground

Marketing had the highest density of repetitive, AI-automatable tasks combined with a CMO willing to sponsor the experiment. Engineering and Sales had neither.

DECISION	RATIONALE
Enablement over training	Emails, office hours, and documentation produced near-zero adoption. Sitting with each person and building their specific workflow together produced 93%.
Build vs. buy for vendor displacement	When the existing vendor's core value could be replicated with AI + existing data platform capabilities, building in-house saved five- to six-figure annual licenses while giving us full control.
Gemini for enterprise agents	Vertex AI ADK provided enterprise-grade deployment, Google Cloud integration, and Gemini Enterprise gave every employee agent access without per-seat licensing friction.
"Tools last" in the three-ingredient sequence	Every failed AI rollout I studied led with tools. Tools without mindset shift and enablement became shelfware. The sequence — mindset, enablement, then tools — is the core strategic insight.

Decisions and rationale recorded during the engagement, not reconstructed after the fact.

POST-MORTEMS

What didn't work

ATTEMPT	LESSON
Self-service AI interface	People need role-specific tools, not a general-purpose AI chat. A "one tool for everything" approach created decision paralysis.
Self-serve enablement (emails, office hours, docs)	Focused 1:1 coaching produced results. Async materials alone produced almost nothing. People don't adopt AI from a PDF.
Early Gemini adoption push	Access does not equal adoption. Giving everyone a tool without showing them their specific use case is giving them a hammer without showing them nails.
AI outbound engine	Multi-system integration (CRM + enrichment + sequencing + AI) requires more orchestration maturity than a team has in month three. Timing matters.

Every failure was an attempt to scale without human readiness first. The three-ingredient formula was designed around that pattern.

Strategy is also where governance starts — every plan is threat-modeled, and the data boundaries are decided, before a line of code exists. **How this runs safely**
→

CHAPTER 02

Transformation

Twenty-six production systems in twelve months —
deployed, measured, and running in the team’s daily work.

\$2.3M

FIRST-YEAR ECONOMIC VALUE,
ITEMIZED IN THE LEDGER

THE TWELVE MONTHS

01 JUN–AUG 2025 Foundation Assessment, first agent builds, early enablement sessions	02 SEP–OCT 2025 Enablement One-on-one coaching, workflow design, team-specific tools	03 NOV–DEC 2025 Infrastructure Knowledge Graph, MCP servers, platform integrations
04 JAN–FEB 2026 Gemini Enterprise Production agent deployments, enterprise-wide access	05 MAR–APR 2026 Scaling Vendor displacements, automation at scale, measurement	06 MAY 2026 Transfer Team operates independently. Playbook ready for enterprise rollout.

MEASURED RESULTS

What the year returned

CATEGORY	RESULT	DETAIL
Time Efficiency	264–273 hrs/week	Saved across team (self-report survey)
Cost eliminated	\$495K/yr	Software displaced, built-instead, or avoided — see the ledger
Economic value	\$2.34M	First-year total, itemized in the ledger
Pipeline	Seven-figure	AI-attributed pipeline (Salesforce-tracked)
AI Utilization	20K+ queries	500–900 hrs/quarter saved via Gemini Enterprise

Pipeline figures are Salesforce-tracked. Time savings converge across two instruments: team survey (264–273 hrs/ week) and the quarterly business review (280 hrs/week).

TASK-LEVEL IMPACT

Before and after, task by task

TASK	REDUCTION
Video Production	85–92%
	8–16 hrs
	1.25 hrs
Creative SLA	80%+
	5 days
	Same day
Webinar Management	90%
	~20 hrs/week
	~2 hrs/week
SEO Optimization	87%
	8 hrs/batch
	1 hr/batch
Speaker Cards	94%
	3 hrs / 50 cards
	10 min
Form Submission Routing	88%
	Manual
	1 form triggers all
Ad Creative SLA	67%
	Baseline
	67% faster

Ink track — time before. Sienna bar — time after, drawn to scale; ranges take the lower bound, and workflows with no measured before-time are listed without bars. Source — self-reported team survey.

THE LEDGER

Where the money comes from

Every dollar claimed in this brief, itemized and classed. Vendor names are withheld for confidentiality; categories and amounts are as recorded.

ITEM	CLASS	BASIS	AMOUNT
Team capacity created — workload absorbed by AI systems without additional hiring	Capacity	Yearly	\$1,500,000
Enterprise DAM platform license	Displaced	Yearly	\$85,000
Employee recognition platform license	Displaced	Yearly	\$25,000
AI meeting-intelligence platform	Equivalent	Yearly	\$240,000
Messaging intelligence system	Equivalent	Yearly	\$65,000
Marketing agent bundle	Equivalent	One-time	\$20,000
Competitive intelligence service	Avoided	Yearly	\$80,000
Keynote & launch content production	Avoided	One-time	\$50,000
Enterprise customer deal, AI-attributed	Revenue	One-time	\$275,000
Recurring annual run-rate		Yearly	\$1,995,000
One-time value		One-time	\$70,000
Closed revenue, AI-attributed	Revenue	One-time	\$275,000
First-year total			\$2,340,000

First-year value ledger • AI-attributed pipeline (seven figures, CRM-tracked) is excluded from every total.

ATTESTED

“Right around 280 hours each week are being saved using AI across the marketing team.” — FY26 Q3 quarterly business review.

COUNTING RULES

Yearly amounts are annual run-rate as of fiscal year end; one-time amounts are counted once.

Displaced — a paid license canceled. Equivalent — a system built in-house instead of buying. Avoided — external spend not incurred. Capacity — measured hours returned, valued at fully-loaded cost of equivalent roles.

AI-attributed pipeline (seven figures, CRM-tracked) is excluded from every total above.

Every system in this chapter shipped through the gates — security-reviewed, eval-tested, and controlled before it touched production. **How this runs safely →**

CHAPTER 03

Education

How a non-technical marketing team became AI builders — one person, one bottleneck, one working system at a time.

575+

AI SKILLS BUILT BY THE TEAM

THE THESIS

Training is not enablement

My first pass looked like every enterprise rollout — announcement emails, documentation, office hours, a standing invitation to experiment. People showed up. Then they went back to their desks and worked exactly as before. Measured honestly, adoption was near zero.

So I stopped teaching the tool and started building the workflow. I sat down with each person on the team, asked to see the worst bottleneck in their week, and built the fix with them — in their files, on their accounts, against their real deadlines. A session ended when the system ran, and the only measure I kept was whether it was still running a month later.

The order never changed: mindset first, enablement second, tools third.

FIRST PASS

workshops • docs • office hours
adoption ≈ 0

SECOND PASS

one-on-one build sessions
adoption 93%
measured on live workflows, not attendance

APPENDIX • PERSONNEL

The roster, by department

Each line is one person and the workflow they now run in production — built or co-built during enablement, documented, and in daily use. The length of the list is the point.

CREATIVE & DESIGN

Creative Director

Automated the entire PowerPoint presentation process for individuals across the organization

Claude Code

Sr. Motion Designer	Utilized AI for the entirety of a major opening video and animation creation	Claude Code + AI Video
Sr. Designer	Creating variations of graphics and videos at scale	Claude Code
Design Lead	Utilizing components, code connect, and Figma MCP to completely automate website design and creation	Figma MCP + Claude Code
Production Designer	Automating scalability of assets — reduced 50 speaker cards from 3 hours to 10 minutes	Claude Code
MARKETING OPS		
Paid Media Manager	Optimizing paid media spend by connecting to GA4, Google Ads, and Search Console via AI	Claude Code
SEO Specialist	Automated SEO optimization from 8 hours to 1 hour per batch using Webflow MCP	Webflow MCP + Claude Code
CRO Specialist	Using an agent trained on CRO best practices and page data for conversion optimization	Custom AI Agent
Events Manager	Automated the entire webinar process with daily follow-up from agents	Domo + AI Agents
Event Coordinator	Built a scheduler to help attendees get scheduled for breakouts using AI	Domo + AI
Digital Marketing Analyst	Utilizing AI in asset creation, event strategy, and overall research	Gemini Enterprise
CONTENT & COMMS		
VP, Corporate Communications	Created specific agents for each communication type with custom guidelines	Custom AI Agents
Content Strategist	Using AI and the Knowledge Graph to create and audit content	Knowledge Graph + AI
Sr. Content Strategist	Using AI and the Knowledge Graph to create and audit content	Knowledge Graph + AI
Email Marketing Specialist	Using AI to generate email copy, briefs, and campaign assets	Gemini Enterprise
Product Marketing Manager	Created and using multiple agents, optimizing the product launch content process	Custom AI Agents
WEB & DIGITAL		
Sr. Web Developer	Implemented Webflow MCP to automate website audits	Webflow MCP
Web Developer	Using code connect, Figma MCP, and Webflow MCP to ensure pages are built correctly	Figma + Webflow MCP
Creative Technologist	Using Claude Code to create animations and optimize the messaging knowledge base	Claude Code
BRAND & COMMUNITY		
Sr. Brand Manager	All major event creative assets were influenced and created with AI	AI Creative Tools

Community Manager	Utilizing AI in community responses and working with the AI team on customer insights	Gemini Enterprise
Content Distribution Specialist	Using Notebook LM for content distribution workflows	Notebook LM + AI
Sr. Blog Manager	Implemented AirOps, automating the blog creation process end-to-end	AirOps + AI

LEADERSHIP

CMO	Orchestrated the design and implementation of the department-wide AI adoption strategy	Strategic Leadership
Executive Assistant to CMO	Utilizing Gemini Enterprise and Claude for calendar organization and communications	Gemini + Claude
Presentation Specialist	Utilizing AI to create complete slide decks end-to-end	AI Presentation Tools

FROM THE ROSTER

Three case notes

WES HOLLEY • CREATIVE DIRECTOR

Wes ran creative delivery on a five-day turnaround, and a single video cost sixteen working hours. We rebuilt the pipeline in his enablement sessions; creative now ships the same day, and a video takes him just over an hour. He is clear about the trade — most of the hand-finished quality at ten times the speed — and he calls it the right one.

VIDEO PRODUCTION

16 h → 1 h 15 m per video
creative delivery: 5 days → same day
“85-90% at 10× speed is the right tradeoff”

MILO BUSH • EVENTS MANAGER

Milo had never written a line of code. His webinar program ran on roughly twenty hours a week of manual administration — scheduling, logistics, follow-up. With AI as his coach, he automated the entire sequence himself, and agents now handle the daily follow-up on their own. The same program takes about two hours of his week.

WEBINAR PROGRAM

~20 h/wk → ~2 h/wk
follow-up: daily, by agents

MARK BOOTHE • CMO

Before the program, AI inside the department was a set of individual experiments with no coordinated strategy. Mark made adoption an operating priority: he orchestrated the design and implementation of the department-wide strategy and held the results to measurement. The roster above is as long as it is because the program had an owner at the top.

SPONSORSHIP

individual experiments →
coordinated strategy
department-wide, measured

The team didn’t just learn the tools – they learned the gates, so the discipline scales without me in the room. How this runs safely →

CROSS-CUTTING

How this runs safely

Governance is not a fourth step — it runs through all three. Plan-time at strategy, controls shipped with every system, gates the team learned to run themselves.

3

GATES BEFORE ANYTHING SHIPS

THE POSTURE

Three gates

Governance here is shift-left — review moves to the earliest point where it can still change the design. Three gates. Plan-time review reads the plan before any code exists: threat model, PII handling, compliance posture, eval strategy. The pre-deploy gate runs on every merge, four domains deep. And milestone review runs the full system — all 13 audit domains, roughly 43 specialist auditors working in parallel.

Every review ends in one of three verdicts — block deploy, proceed with caveats, or ship — and severity is policy, not opinion. Critical and high findings block the merge. Medium findings get scheduled. Low findings get logged. Nobody negotiates with the gate.

THE GATES

plan-time → pre-deploy →
milestone

THE RULEBOOK

The standards ledger

A finding that traces to a published framework survives an audit; a finding that traces to my taste does not. Every check in the review system maps to one — the same standards an external assessor would bring, run before the assessor arrives.

WHY STANDARDS

The 120 framework-mapped checks above are the core; the remaining 32 are implementation-level — client-side AI surfaces, platform specifics.

FRAMEWORK	SCOPE	CHECKS
OWASP Top 10 2021	Web application security	43
OWASP LLM Top 10	Prompt injection, output handling, excessive agency	10
OWASP Agentic Top 10	Tool misuse, memory poisoning, cascading failures	10
OWASP MCP Top 10	Token hygiene, tool poisoning, shadow servers	10
SOC 2 CC6–CC9	Access, operations, change management, risk mitigation	14
CIS Controls v8	Enterprise security baselines	13
NIST SP 800-53	Selected controls from the catalog	12
GDPR / CCPA	Privacy obligations — applied when PII is present	8

152 security checks per full review · 115 backend, 37 frontend

AGENTIC RISK

What AI changes about risk

Most of the rulebook predates AI; the newest checks exist because agents are different. Software that reads, decides, and acts needs controls ordinary code never did. Prompt injection, direct and indirect — including tool descriptors poisoned to turn an agent’s own instructions against it. Human-in-the-loop gates on any tool that is destructive or irreversible. Agent identity and confused-deputy prevention, so a system acting on someone’s behalf can never borrow more authority than that person holds. Memory poisoning. Cross-tenant context bleed. Cost and turn caps, so no agent can run away with a loop or a budget.

Customer-facing agents carry the strictest set — they ship with approval gates, suppression lists, and disclosure.

VERIFICATION

Trust is adversarial

The verification rule is blunt: a check without a command run is a skip. An auditor that reads code and nods has verified nothing — run the probe, capture the output, then judge. The same rule covers fixes: reproduce the bug before trusting the patch.

Evals are model-risk controls, not marketing. The CMO agent's 110-question suite gates its deploys — fail the suite, miss the release. And the honest number is the held-out one: the Agent Factory ships at a 91% pass rate, published because a self-graded 100% means the test is too easy.

THE PERIMETER

Data boundaries

Everything in this record runs inside the company's existing platform permissions — no system widens the aperture. Dataset access controls are reproduced in full; the DAM migration shipped with a complete ACL parity layer, granting exactly what the old system granted and nothing more. MCP servers sit behind OAuth with allowlisted tools. Secrets live in managed stores. Nothing is trained on customer data.

Published screenshots in this brief are blurred for confidentiality.

IN PRACTICE

The news-monitoring workflow shipped only after a 90-agent security audit surfaced — and remediated — an SSRF class.

Six case files

26

Every system in this section is in production. Six are examined in detail; the rest are indexed in the catalog.

SYSTEMS IN PRODUCTION

FILE 01 • VENDOR DISPLACEMENT

The enterprise DAM displacement

I replaced the marketing org’s enterprise DAM platform with a Domo-native system built on infrastructure the company already pays for. Browse, search, collections, permissions — the full asset-management surface, rebuilt in-house. The migration moved more than 35,000 documents with zero mismatches. Underneath, 87 Code Engine functions carry the workflow logic, and a complete ACL layer reproduces the access model the vendor charged for. The displacement was run like a procurement exit: access parity proven, data egress verified, contract wound down on schedule.

RETURN

Mid-five-figure annual license displaced

STACK

Domo Fileset • AppDB • Code Engine • Custom Apps • SQL DataFlows

SYSTEM SPEC

Documents migrated	35,000+
Migration mismatches	0
Code Engine functions	87

CONTROLS

Full ACL parity with the displaced platform; security-reviewed before cutover; zero-mismatch migration audit.

OWNER

Marketing ops — documented runbook; maintained without me since May 2026.

Fig. 01 — Asset browser in production: filters, collections, and the migrated library.

FILE 02 • SALES & REVENUE

The AI outbound engine

A fully automated outbound pipeline, run as one system rather than a stack of disconnected tools. Five stages — discover, enrich, sequence, agent feedback, converted prospect — each hand a cleaner record to the next. The data platform supplies targeting and enrichment, Apollo carries the sequences, and the agent feedback stage closes the loop. The architecture below is the system as built.

STATUS

In production — five-stage pipeline

STACK

Domo • Apollo.io • Gemini • JavaScript

SYSTEM SPEC

Pipeline stages	5
Systems orchestrated	4

CONTROLS

Human approval gates before any send; suppression lists honored at every stage.

OWNER

Revenue marketing.

Fig. 02 — Pipeline architecture, first signal through converted prospect.

FILE 03 • ENTERPRISE AI AGENTS

Marketing intelligence for the CMO

An executive reasoning engine built for the CMO: attribution, funnel analysis, and ROI modeling over the marketing data estate. Questions that once waited in an analyst queue come back in minutes. Twenty tools sit behind the conversation, and every release runs a 110-question test suite before it ships — the current pass rate is 100%.

RETURN

Consolidates 2-3 analyst functions; decision speed from days to minutes

STACK

Gemini 2.5 Flash • Vertex AI ADK • Domo • Salesforce

SYSTEM SPEC

Tools	20
Test suite	110 questions
Regression suite	110 Q

CONTROLS

110-question eval suite gates every deploy; read-only data access.

OWNER

Marketing analytics.

FILE 04 • KNOWLEDGE & INFRASTRUCTURE

The knowledge graph platform

The substrate beneath the agent fleet. A graph database holds product messaging, competitive intelligence, and industry data as connected knowledge rather than scattered documents, and a 55-tool API serves it to every agent in production. A custom Figma plugin puts the same source of truth inside the design canvas, so designers pull approved messaging instead of paraphrasing it.

RETURN

\$65K/yr license equivalent

STACK

Graph Database • Python • Flask • React • Figma Plugin API

SYSTEM SPEC

API tools	55
Knowledge domains	3
Surfaces	API • Figma

CONTROLS

OAuth-gated API; read-only by design; allowlisted tools.

OWNER

Marketing ops.

FILE 05 • VENDOR DISPLACEMENT

The employee recognition platform

A second displacement, this one for HR: a Domo-native employee recognition and rewards platform covering nomination approvals, spot-bonus routing, anniversary tiers, and budget management. It administers 125 live budgets in production, and its 34-test suite passes clean on every release. Compensation-adjacent routing shipped under finance’s approval rules from day one.

RETURN

Five-figure annual license displaced

STACK

Domo Custom Apps • Code Engine • Workflows • AppDB

SYSTEM SPEC

Live budgets	125
Tests passing	34/34

CONTROLS

Spot-bonus routing under finance approval rules; access scoped by role.

OWNER

HR program owner + marketing ops.

Fig. 03 — Recognition feed, milestones, and rewards in the live app.

FILE 06 • ENTERPRISE AI AGENTS

The paid search agent

A paid media analyst that never leaves the account. The agent reads Google Ads performance across six regional datasets, generates keywords and ad copy, and runs competitor analysis on demand — 24 tools in one conversational surface. The work it absorbs is the work a dedicated analyst would otherwise be hired to do.

RETURN

Equivalent to a dedicated paid media analyst (\$80-120K/yr)

STACK

Gemini 2.5 Flash • Vertex AI ADK
• Google Ads API • Domo

SYSTEM SPEC

Tools	24
Regional datasets	6

CONTROLS

Recommend-only — no autonomous spend changes; human approval on every action.

OWNER

Paid media team.

CATALOG • 34 ENTRIES

The rest of the record

One line per entry, returns set at the margin — production systems first, then artifacts, then personal builds.

Production systems

ENTERPRISE AI AGENTS • 10

Competitive Intel Agent	— AI competitive intelligence analyst	\$100K+/yr analyst displaced
Sales Discovery Agent	— sales discovery coach using a structured questioning framework	AE ramp time reduced
MarketingHub	— multi-agent router that delegates to specialized agents (Competitive Intel, Knowledge Graph Assistant)	One interface for all marketing AI
Creative Asset System	— gemini Enterprise agent generating brand-compliant creative across 6 output types: images, emails, presentations, SVG/vector, video, and social assets	\$50-100K/yr agency reliance cut
Agent Factory	— AI agent inside Domo that builds other AI agents	Agent creation: weeks to hours
One Chat Agent	— unified front-line agent connecting knowledge base, community, website, CRM, and support	Support channels consolidated

Stock Distribution Agent	— built for the HR and finance teams under their access controls: monitors employee stock distributions, departures, tax-document deadlines, and compliance events	Manual equity tracking automated
AI Onboarding Experience	— onboards new customers with AI-guided training checklists, product tours, and personalized enablement paths	Onboarding scaled, no added roles
Rooster IQ	— brand intelligence watcher for the executive team	Always-on brand intelligence
Live Translator Agent	— real-time call translation agent enabling cross-language conversations during live meetings and customer calls	Language barriers removed

VENDOR DISPLACEMENT • 2

Signal Platform (AI SDR)	— AI-powered SDR platform replacing a six-figure sales engagement tool	\$36K–130K/yr platform displaced
Media Relations Platform	— proactive AI media relations replacing a PR platform	Five-figure PR license displaced

KNOWLEDGE & INFRASTRUCTURE • 1

MCP Servers (3)	— three Model Context Protocol servers: Creative (image/video generation with brand enforcement), Knowledge Graph (23 tools), and Data Platform (146 tools, 647 endpoints)	Powers all agent/creative systems
-----------------	--	-----------------------------------

CREATIVE & MEDIA PRODUCTION • 1

Video Pipeline	— scalable AI-avatar video production system	Video: 16 hrs to 1 hr 15 min
----------------	--	------------------------------

SALES & REVENUE • 2

Sales Navigator	— real-time AI sales coaching desktop app	AE ramp cut, close rates improved
Deck Builder	— automated PowerPoint generation from templates + data	Deck creation: hours to minutes

OPERATIONS & AUTOMATION • 3

Weekly Executive Report	— automated CMO Friday report	4–6 hrs/wk saved (~\$15K/yr)
Domo Monitoring Agents	— autonomous system health monitoring	Production incidents prevented
Tracking Workflow (News Monitor)	— two-workflow media monitoring system	Zero manual media monitoring

EDUCATION & ENABLEMENT • 1

Front-End Sites (14)	— internal tools: operations consoles, agent showcases, monitoring dashboards, an executive reporting app, a messaging knowledge base, and more — fourteen in total	\$70–210K agency cost avoided
----------------------	---	-------------------------------

Selected artifacts

Not systems — the videos, courses, and presentations the systems made possible.

Domo Toolkit & Onboarding	— shared documentation platform and GitHub Pages onboarding site for the marketing team	Knowledge transfer scaled past 1:1
CEO Keynote (AI Graphics)	— all AI-generated graphics for the CEO's keynote presentation	\$20-50K/event agency cost avoided
Build-First AI Agent (Video)	— complete polished video tutorial teaching viewers to build their first AI agent	Fraction of studio production cost
One Health Solutions Video	— client-facing video showcasing AI transformation results, presented at a major company event	Client engagement + event content
Gemini Agent Animations	— animated agent demonstrations featured in the Google Cloud partner keynote	Google Cloud keynote feature
Board & Executive Presentations	— countless AI-crafted presentations for board meetings, executive reviews, and stakeholder briefings	Presentations at scale, no agency
Marketing Bundle	— bundled agent suite: Paid Search Agent + Competitive Intel + Knowledge Graph Assistant + MarketingHub router	Marketing's AI operating system
Team Onboarding Course (15 modules)	— complete interactive onboarding course for the team	The team runs it independently
575+ AI Skills & Workflows	— the aggregate output of the education program	Education program scorecard
AgentGuide	— framework and guide for building AI agents inside the data platform	Anyone can build agents

Off the clock

Personal builds from nights and weekends — they sit outside the record's production stats.

SAVOS Law Outreach	— automated law firm outreach: Google Places + Apollo discovery, SEMrush audit, Claude Agent SDK mockup generation, Apollo cadence enrollment	Automated client acquisition
Claudeopedia	— personal LLM-powered knowledge base with Obsidian frontend	Personal knowledge system
CrowdSync AI DJ	— autonomous AI wedding DJ	Full C++ fork + real-time AI brain
Land Engine	— AI-powered property due diligence SaaS for Utah developers	Full SaaS: auth, payments, API

ON THE RECORD

The public references

The work described in this brief is on the public record — in national press, in a Google Cloud partner keynote, and on the CEO's main stage.

REF 01 • PRESS

Bissell's AI workflows, built in two days

TechRepublic's national coverage of the two-day Bissell build — the engagement I delivered. Attribution available on a reference call.

techrepublic.com/article/news-bissell-ai-workflows-two-day-build-domo

REF 02 • KEYNOTE

Google Cloud partner keynote, Domopalooza

Jim Fairweather, Head of AI GTM at Google Cloud, presented the agent animations I produced — the keynote is public; my authorship is attested on request.

domo.com/domopalooza/resources/partner-keynote-from-jim-fairweather

REF 03 • KEYNOTE

CEO keynote — AI transformation showcase

Every graphic in the keynote was AI-generated — produced by my pipeline; 100+ slides, no design agency.

youtu.be/7Hv01SnfubQ

A fourth artifact — the tutorial "Build your first AI agent," with script, visuals, and voiceover produced entirely with AI across 15+ iterations — ships with the web edition of this brief at jakeheaps-coder.github.io/jake-heaps-portfolio.

The proof of concept is complete.

I started in growth marketing — running campaigns, then teams. The longer I ran them, the more I was pulled toward the systems underneath: why work flowed the way it did, and what would happen if the repetitive ninety percent of it simply went away. That question became my career. Today I design AI operating systems for enterprises — the strategy, the production systems, and the part almost everyone skips, the adoption.

I lead AI implementation at Domo today — full-time, in the operating seat. This brief is that seat's output: 26 production systems, a first-year value ledger that closed at \$2.3M, and a ~30-person marketing organization where 93% of the team now builds with AI independently. The transfer completed in May 2026, and the systems have run without my daily hands since — by design. Enablement, not dependency, is the product.

I'll name the question this document raises rather than leave it to your diligence: the job I'm describing barely existed three years ago. Nobody has twenty years of it. The only credential anyone in this discipline can offer is an operating record — measured, itemized, attested — and that is what you're holding.

How I work comes from how I grew up. I'm the youngest of three brothers, which means I have never once been allowed to win anything easily. I played everything — baseball, basketball, soccer — and football through high school, where a phrase got into my bones and never left: love the challenge, love your teammates, love the process. I spent two years of service in San Bernardino, California, where I learned Spanish and learned that you change what people do by sitting next to them, not by sending them a document. That, it turns out, is also the entire secret of enterprise AI adoption.

Outside of work: family first. This August I'm marrying Ella — we met through my mom, who she works with. The rest of my time goes to sports, the gym, and building things on nights and weekends because I genuinely cannot help it.

The proof of concept is complete. If you're building toward the seat this record describes — where AI becomes how the company operates, not a pilot program on its edge — I'd like to talk.
